Talked with our Manufacture and they said that the new systems will talk to the old ones, however, the old systems would have an old flash pattern that is not MUTCD-compliant, so they should upgrade the EMSs in those systems and get them up to date. They also recommend purchasing some new ambient brightness sensors in addition to the EMSs.

Updating the flash pattern is actually recommended in the latest interim approval IA-21:
https://mutcd.fhwa.dot.gov/resources/interim_approval/ia21/index.htm

5 (f) Existing RRFB units that use the flashing sequence that was specified in the Interim Approval 11 memorandum and a subsequent interpretation (the RRFB indication on the left-hand side emits two slow pulses of light after which the RRFB indication on the right-hand side emits four rapid pulses of light followed by one long pulse of light) should be reprogrammed to the flash pattern specified above in Condition 5b as part of a systematic upgrading process, such as when the units are serviced or when the existing signs are replaced.
